

Autumn Renovation at Tintagel Cricket Club 2015

A Guide to “How it’s done”

Steve had Glysohated some strips prior to commencing scarification using the Scarifying Cassette of The Dennis FT 510 Mower and scarified using the Union Jack principle, whilst this took a great deal of time I believe he has demonstrated what scarification should look like at this time of the year.

The Deep Spiking was carried out by Paul Cotton. The Square having been well watered prior to this, using his Charterhouse machine. The Loam was spread using Paul’s Sisis Spreader, this machine effected an extremely even spread, following this The Square was Drag Matted for about an hour.

Final scarification of the Square

Deep Spiking

Deep Spiking

Application of Loam

Final Drag Matting
